01 / THE IDEA

The Great Plot Twist

A text mystery becomes a cooperative coast.

> **The programming problem**
>
> Make an island easy to explore while keeping its rules trustworthy.

Original pixel art and sound.
Browser presentation. Python rules.
Play money only.

Original project assets · docs/lanes/G.md · docs/PRESENTER-SCRIPT.md

Explore. Investigate. Decide.

Four verbs, with an explicit boundary between implementation and connection.

01

Travel

Choose a place on the sea chart.

02

Investigate

Find clues through server-checked actions.

03

Cooperate

Different seats contribute to a shared board.

04

Continue

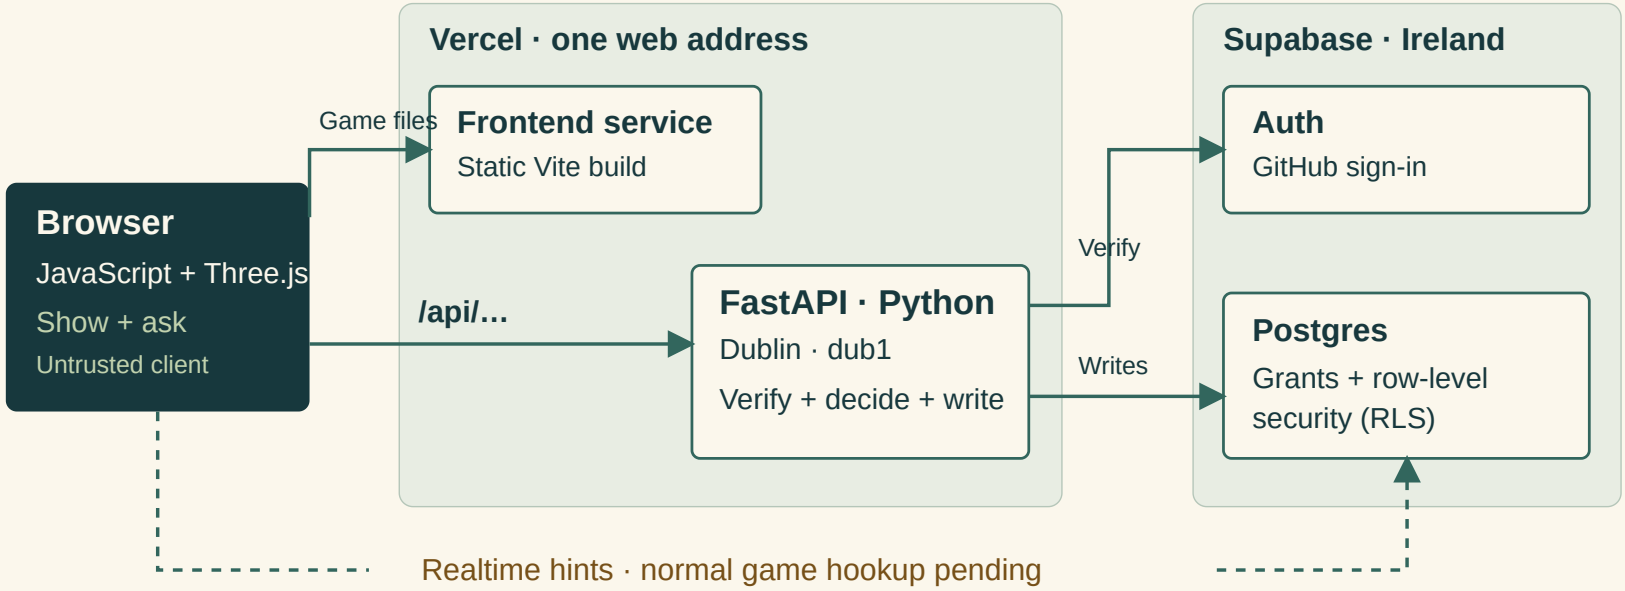

Keep browser and authoritative progress distinct.

Built World, intro, case backend, crews and play-money systems.

Paused G9: connect the normal browser mystery and multiplayer flow.

Case proof: docs/handoff/case-complete-release.md · frontend/src/adapter/select.js

Three parts, one trust boundary.

Browser: show and ask. Server: verify and decide. Database: enforce constraints.

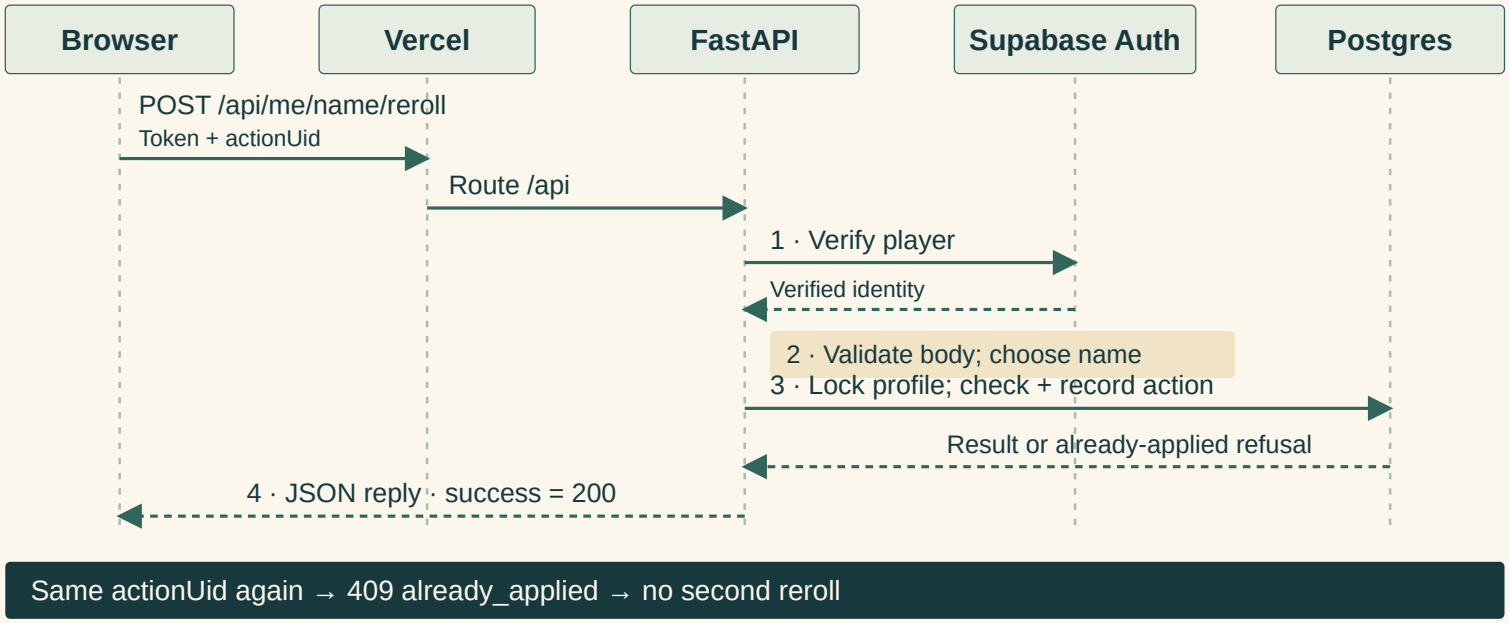

Permitted browser reads use grants and RLS. Authoritative game writes go through the API.

vercel.json · docs/ARCHITECTURE.md · docs/INTERFACES.md

04 / ONE WRITE, END TO END

Follow one request.

Implemented API example: reroll a generated captain name. Normal game account transport still awaits integration.

backend/server/routes/captain_name.py · account/name_store.py · case_service.py

05 / RULES AND ACCESS

The server decides. The database guards.

Verified identity → Valid intent → Python rules → Atomic write

Grants and RLS

Operation permission and row visibility are separate checks.

Locks and constraints

Concurrent requests preserve ownership and wallet invariants.

Exact receipts

Retries recover the recorded outcome without paying twice.

Privileged server access bypasses RLS. Every service still has to verify the caller and scope the crew.

supabase/README.md · wallet rules · case/NPC receipt and concurrency tests

06 / INFORMATION AND PRESENTATION

Protect the story and the browser.

01 · STORY

Earned information

Case views exclude unreached cards and unearned reveal text.

02 · BROWSER

Small allowed surface

Private views use no-store. CSP restricts scripts and assets.

03 · SOUND

Visible, optional cues

Original audio starts after a gesture, with captions and volume controls.

Production build: 130 text files checked against 12 protected lines, plus elimination-data checks.

Build guard · production CSP checks · frontend/ASSETS.md · audio/festival.js

07 / THE EVIDENCE

Prove a behavior, then name its limit.

69

player-kit mixes solve from starting resources

2

real HTTP → service → scratch SQL playthroughs

Solo + NPC partners | Four-player crew | 1,672 frontend tests | Build and spoiler guard passed

The deployed live-extras release passed 11,168 backend tests. Current-wave gates are recorded separately. Disposable SQL and browser fixtures do not prove production multiplayer or physical-device performance.

docs/handoff/case-complete-release.md · sources.md · root release-candidate gates

Small tasks. Independent checks. Human ownership.

01

Human scope

02

Isolated task

03

Tests and build

04

Independent review

05

Authorized integration

Codex currently integrates for Nils under standing authorization. Database files receive individual review, scratch checks, exact-text proof and live schema/advisor checks.

Four equal teammates remain responsible for understanding and explaining the program. Missing credit names stay explicit placeholders.

CONTRIBUTING.md · AGENTS.md · current Nils authorization · per-file release proofs

Boundaries make failures explainable.

01

Separate authority

A convincing screen is not an authoritative game state.

02

Keep the retry identity

A second failure still does not resolve the first unknown write.

03

Test the lifetime

Closing a screen must stop polling, playback and late handoffs.

Original media, clear contracts and observable recovery.

Festival adapter/audio/lifecycle regressions · A7 handoff guards · browser input checks

Connect. Configure. Rehearse.

CONNECT

Resume G9

Finish the normal authenticated browser mystery and crew flow.

CONFIGURE

Keep gates honest

Sports needs its provider key. The ChatGPT helper needs an approved website client. Both stay off.

REHEARSE

Use the safe demo

Show the coast and stop at the schooner. Test the actual laptop and projector.

A complete backend is evidence.

A connected browser journey is the next proof.
